Warehouse-specific inventory transactions

Dmytro Pohorielov

Software Engineer at Microsoft

ABOUT US

Marta Prazanowska

Software Engineer at Microsoft

Agenda

1. Inventory transactions as we know them
2. Introducing warehouse-specific transactions
3. Demo
4. Performance
5. Breaking changes
6. Release schedule

Inventory transactions as we know them

InventTrans

Common abstraction over inventory changes.

Data used for:

- ✓ reservations,
- ✓ on-hand quantities,
- ✓ inventory value calculations

Created	Quantity	Item	Location
12:15	+3	cake	warehouse_51
12:20	-2	lollipop	warehouse_24
13:30	-1	chocolate bar	shelf_7
13:30	+1	chocolate bar	staging

InventTransOrigin

Common abstraction over originator of the inventory changes.

Reference category examples:

- Sales
- Production
- Purchase
- Inventory counting
- WHS Work
- WHS Container

InventTrans

Created	Quantity	Item	Location
12:15	+3	cake	warehouse_51
12:20	-2	lollipop	warehouse_24
13:30	-1	chocolate bar	shelf_7
13:30	+1	chocolate bar	staging

InventTransOrigin

Reference category	Reference id
Transfer Order	TO-006
Sales Order	SO-113
Work	W-402
Work	W-111

Inventory Transactions example*

* very simple example

1. Create SO for 2 items.
2. Pick 2 items.
3. Put away 2 items to baydoor.

Created	Quantity	Item	Location	Reference category	Reference id
12:15	-2	headphones	warehouse_51	Sales Order	SO-065

Inventory Transactions example

1. Create SO for 2 items.
2. Pick 2 items.
3. Put away 2 items to baydoor.

Created	Quantity	Item	location	Reference category	Reference id
13:00	-2	headphones	warehouse_51	Sales Order	SO-065
14:14	-2	headphones	shelf_3	Work	W-115
14:14	+2	headphones	user	Work	W-115

Inventory Transactions example

1. Create SO for 2 items.
2. Pick 2 items.
3. Put away 2 items to baydoor.

Created	Quantity	Item	location	Reference category	Reference id
13:00	-2	headphones	warehouse_51	Sales Order	SO-065
14:14	-2	headphones	shelf_3	Work	W-115
14:14	+2	headphones	user	Work	W-115
14:16	-2	headphones	user	Work	W-115
14:16	+2	headphones	baydoor	Work	W-115

Inventory Transactions example

1. Create SO for 2 items **with serial number**.
2. Pick 2 items.
3. Put away 2 items to baydoor.

Created	Quantity	Item	Serial id	location	Reference category	Reference id
13:00	-2	headphones		warehouse_51	Sales Order	SO-006
14:14	-1	headphones	s1	shelf_3	Work	W-115
14:14	-1	headphones	s2	shelf_3	Work	W-115
14:14	+1	headphones	s1	user	Work	W-115
14:14	+1	headphones	s2	user	Work	W-115
14:16	-1	headphones	s1	user	Work	W-115
14:16	-1	headphones	s2	user	Work	W-115
14:16	+1	headphones	s1	baydoor	Work	W-115
14:16	+1	headphones	s2	baydoor	Work	W-115

Inventory Transactions example

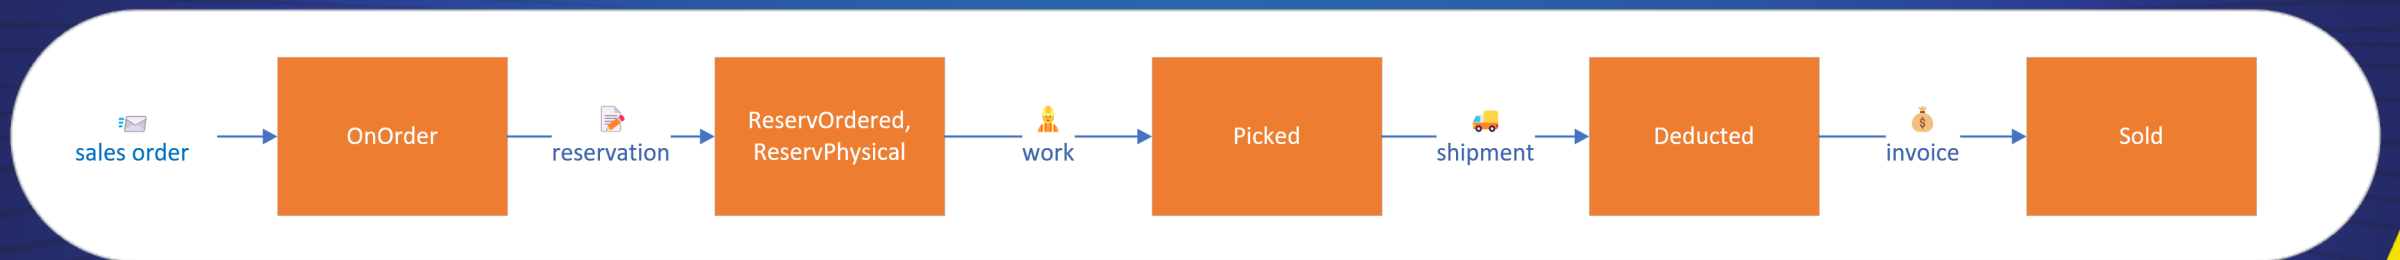

1. Create SO for 2 items **with serial number**.
2. Pick 2 items.
3. Put away 2 items to baydoor.

created	quantity	Item	Serial	location	Reference category	Reference id
13:00						06
14:14						
14:14						
14:14						
14:14						
14:16						
14:16	-1	headphones	s2	user	Work	W-115
14:16	+1	headphones	s1	baydoor	Work	W-115
14:16	+1	headphones	s2	baydoor	Work	W-115

**not optimized
for tracking dimensions**

InventTrans - statuses and updates

- ✓ Multiple statuses
- ✓ Designed to follow sequence of states
- ✓ Support for financial updates

InventTrans - statuses and updates

- ✓ Multiple statuses
- ✓ Designed to follow sequence of states
- ✓ Support for financial updates

**not optimized
for warehouse processes**

Introducing warehouse-specific transactions

Warehouse transactions

- ✓ represent operations over a set of items
- ✓ insert-only
- ✓ no financial information
- ✓ less fields
- ✓ less DB indexes
- ✓ sequential guides
- ✓ efficient validation mechanism
- ✓ denormalized inventory dimensions and transaction originator

New data model

WHSInventoryTransaction

Transaction - change performed in the warehouse.

Keeps track of **storage dimensions**.

Created	Set id	Type	Location	Reference category	Reference id
12:15	17	Issue	shelf_7	Work	W-123
12:15	17	Receipt	user	Work	W-123

WHSInventoryItemSetElement

Inventory - object of the transaction.

Keeps track of **product and tracking dimensions**.

Set id	Item id	Quantity	Batch
17	cake	3	b1
17	cake	5	b3
17	cake	5	b4

New data model

WHSInventoryTransaction

Transaction - change performed in the warehouse.

Keeps track of **storage dimensions**.

Created	Set id	Type	Location	Reference category	Reference id
12:15	17	Issue	shelf_7	Work	W-123
12:15	17	Receipt	user	Work	W-123

WHSInventoryTransactionTypeEnum (sys) [Application Suite]
PhysicalReservation
RemovedPhysicalReservation
RegisteredIssue
RegisteredReceipt

WHSInventoryItemSetElement

Inventory - object of the transaction.

Keeps track of **product and tracking dimensions**.

Set id	Item id	Quantity	Batch
17	cake	3	b1
17	cake	5	b3
17	cake	5	b4

Set can be reused by different transactions

Warehouse Transactions example*

* very simple example

InventTrans / InventTransOrigin

Created	Quantity	Item	Location	Reference category	Reference id
12:15	-2	headphones	warehouse_51	Sales Order	SO-065

WHSInventoryTransaction

Created	Set id	Type	Location	Reference category	Reference id
12:30	a34b	Issue	user	Work	W-223
12:30	a34b	Receipt	baydoor	Work	W-223

WHSInventoryItemSetElement

Set id	Item id	Quantity	Serial id
a34b	headphones	1	s1
a34b	headphones	1	s2

Reservations

Created	Type	Location	Reference category	Reference id
12:10	Reservation	shelf_7	Work	W-223

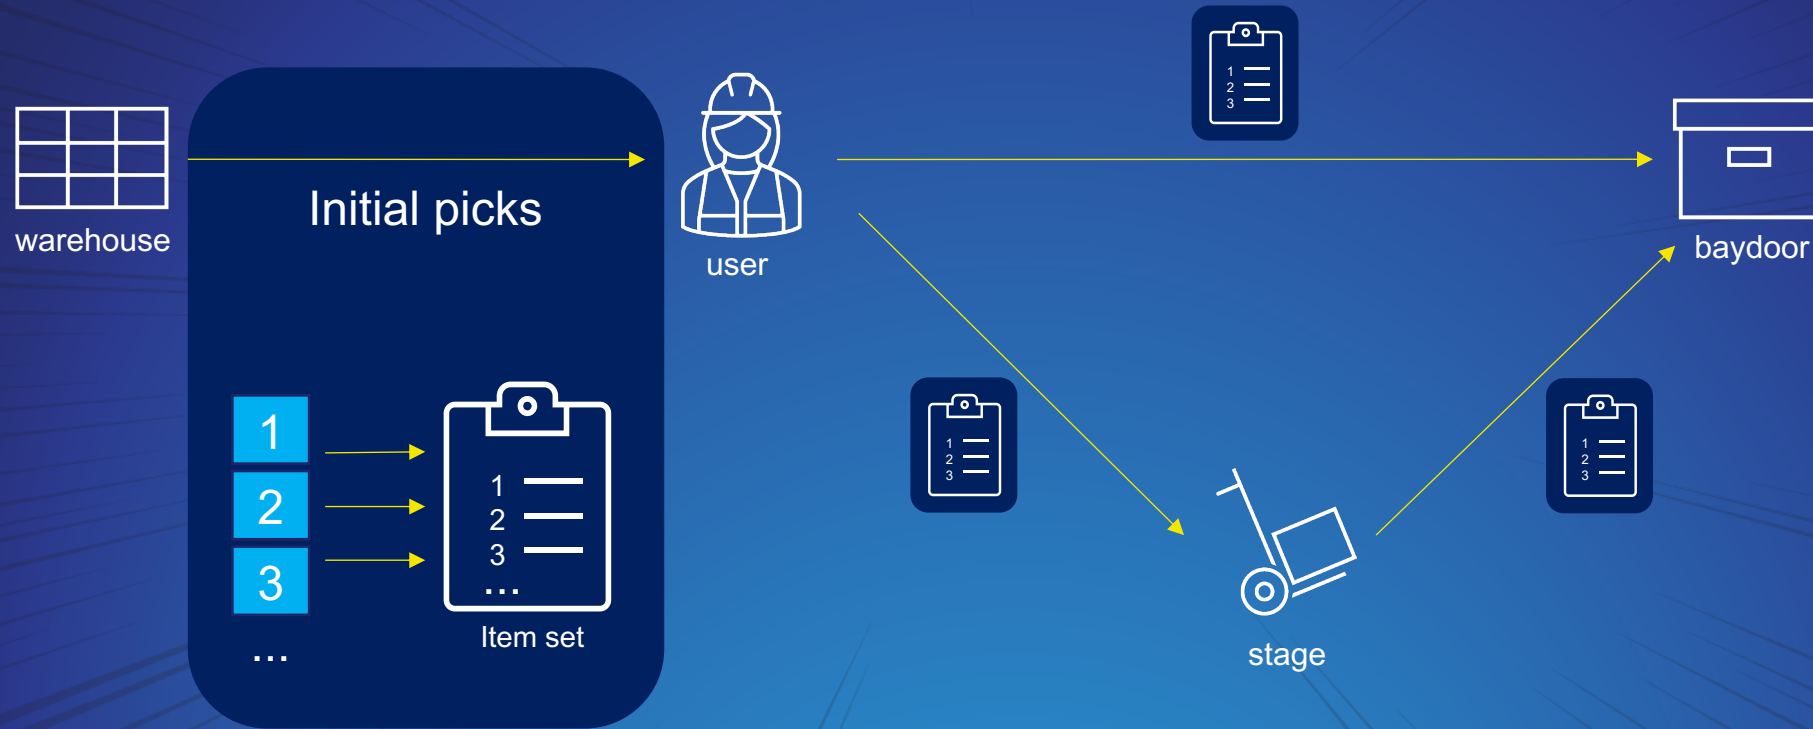

Reservations

Created	Type	Location	Reference category	Reference id
12:10	Reservation	shelf_7	Work	W-223
12:15	Removed reservation	shelf_7	Work	W-223
12:15	Issue	shelf_7	Work	W-223
12:15	Receipt	user	Work	W-223

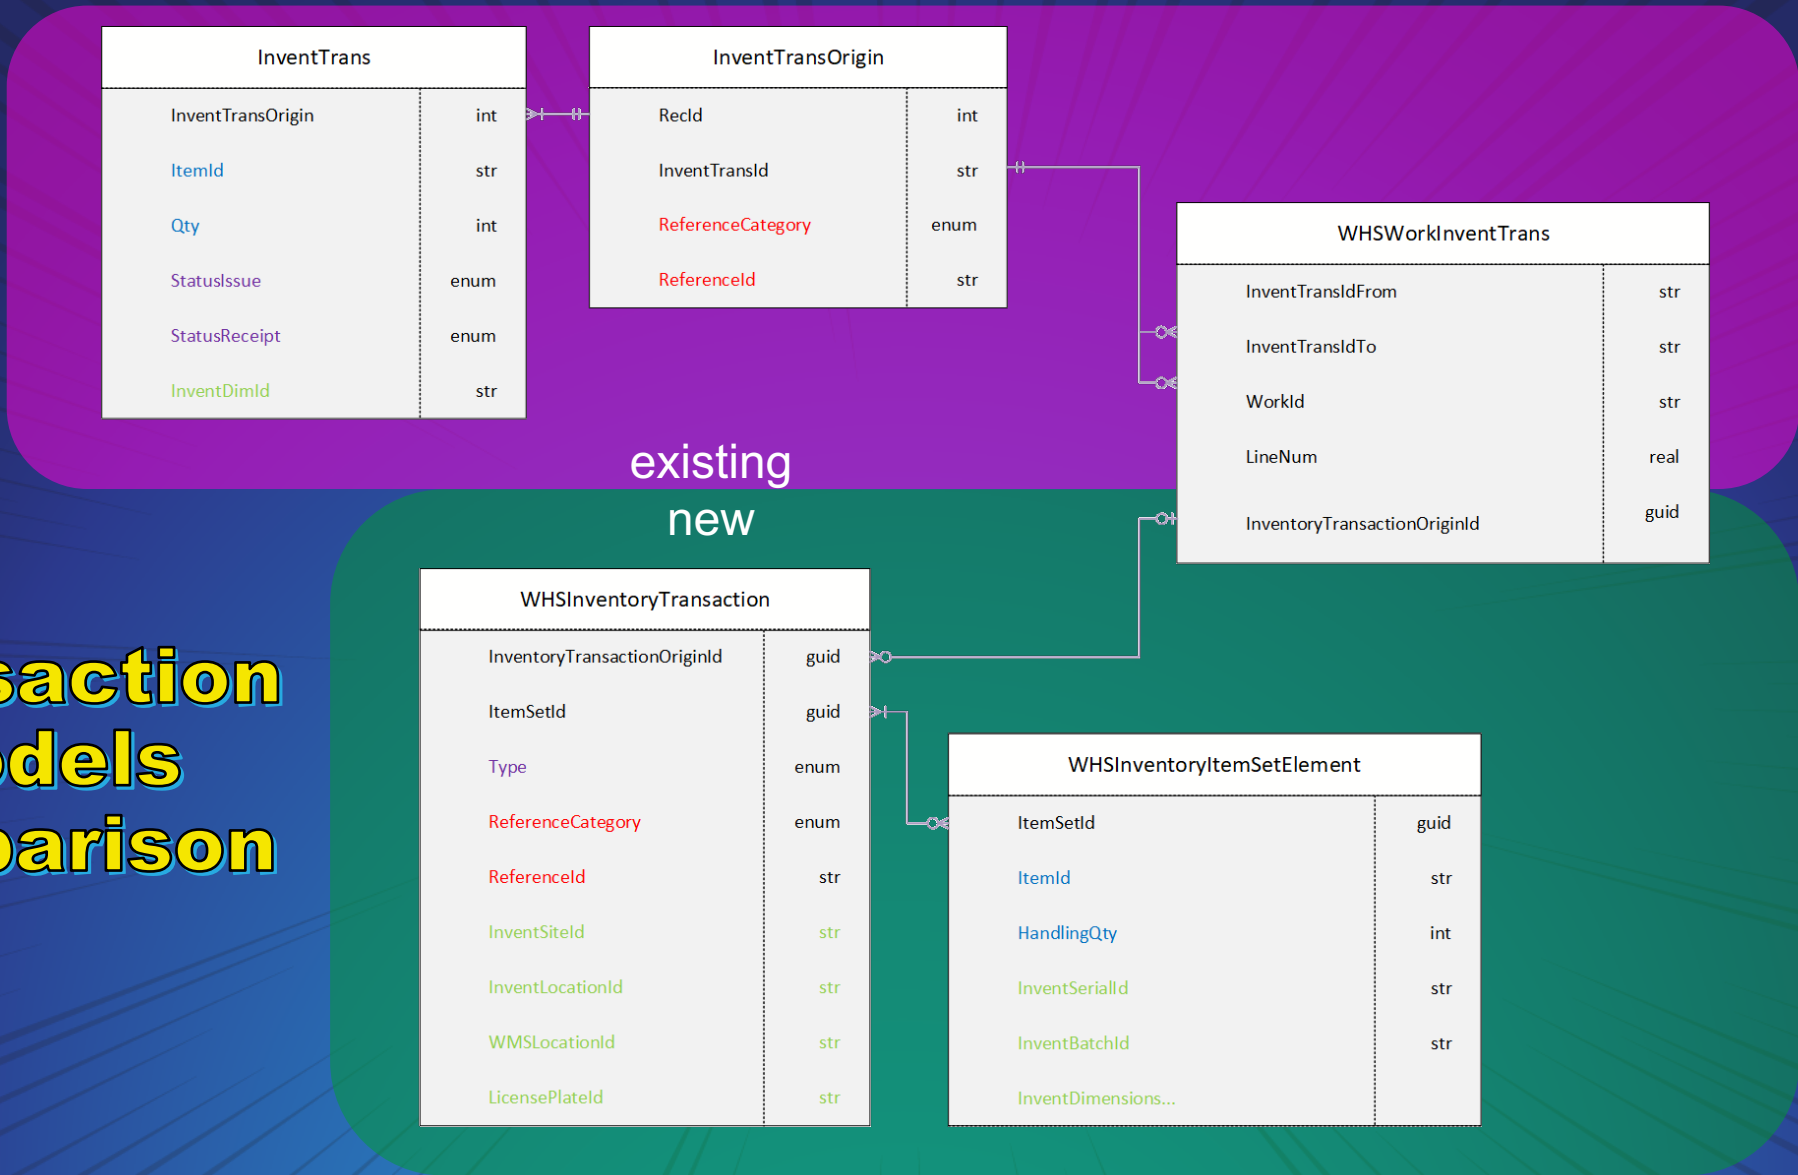

Reservations

Created	Type	Location	Reference category	Reference id
12:10	Reservation	shelf_7	Work	W-223
12:15	Removed reservation	shelf_7	Work	W-223
12:15	Issue	shelf_7	Work	W-223
12:15	Receipt	user	Work	W-223
12:15	Reservation	user	Work	W-223

Configuration

- ✓ *Warehouse-specific inventory transactions* feature
- ✓ warehouse management parameters

WHSWorkTable.InventoryTransactionMechanism
WHSContainerTable.InventoryTransactionMechanism

Mechanism cannot be changed for already created work/container.

DEMO !!!

Performance

Performance

Sales Picking – DevBox, Demo Data

Performance

Full License Plate move – DevBox, Demo data

Performance

Reported by customers

Full LP movement: **~3-9 times faster**

Sales picking improvements: **~50% faster**

Breaking changes

How does this feature affect customizations?

No inventory transactions

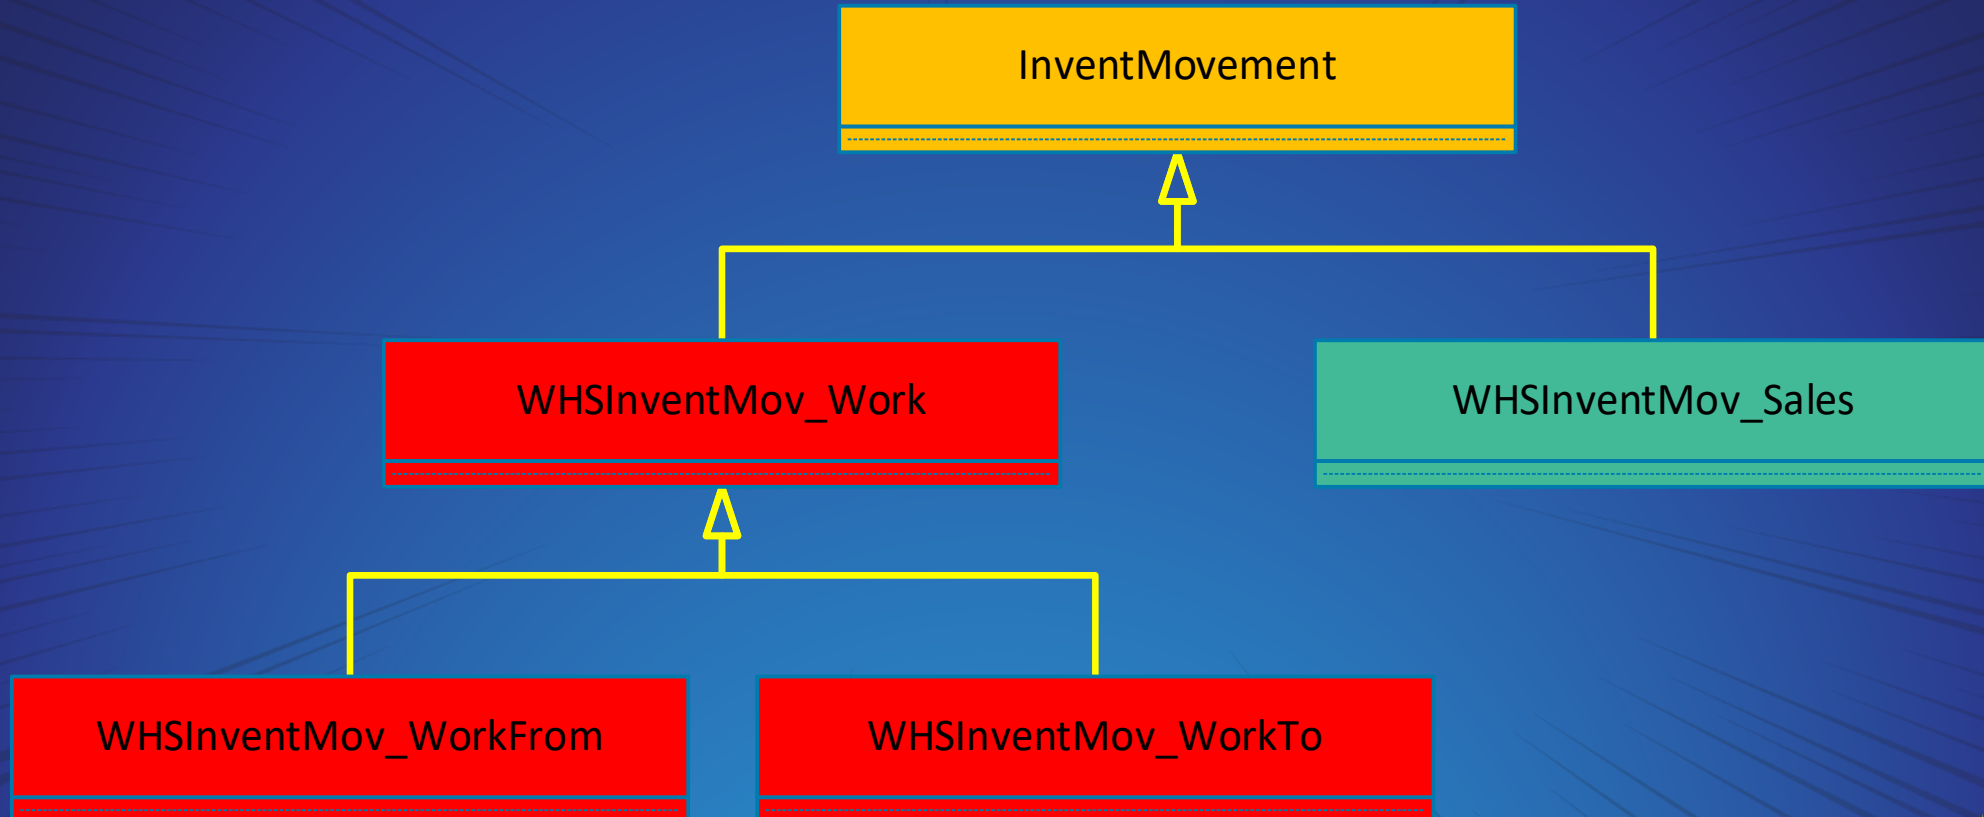

Warehouse works and containers have no records in:

- InventTrans
- InventTransOrigin
- InventTransOriginTransfer

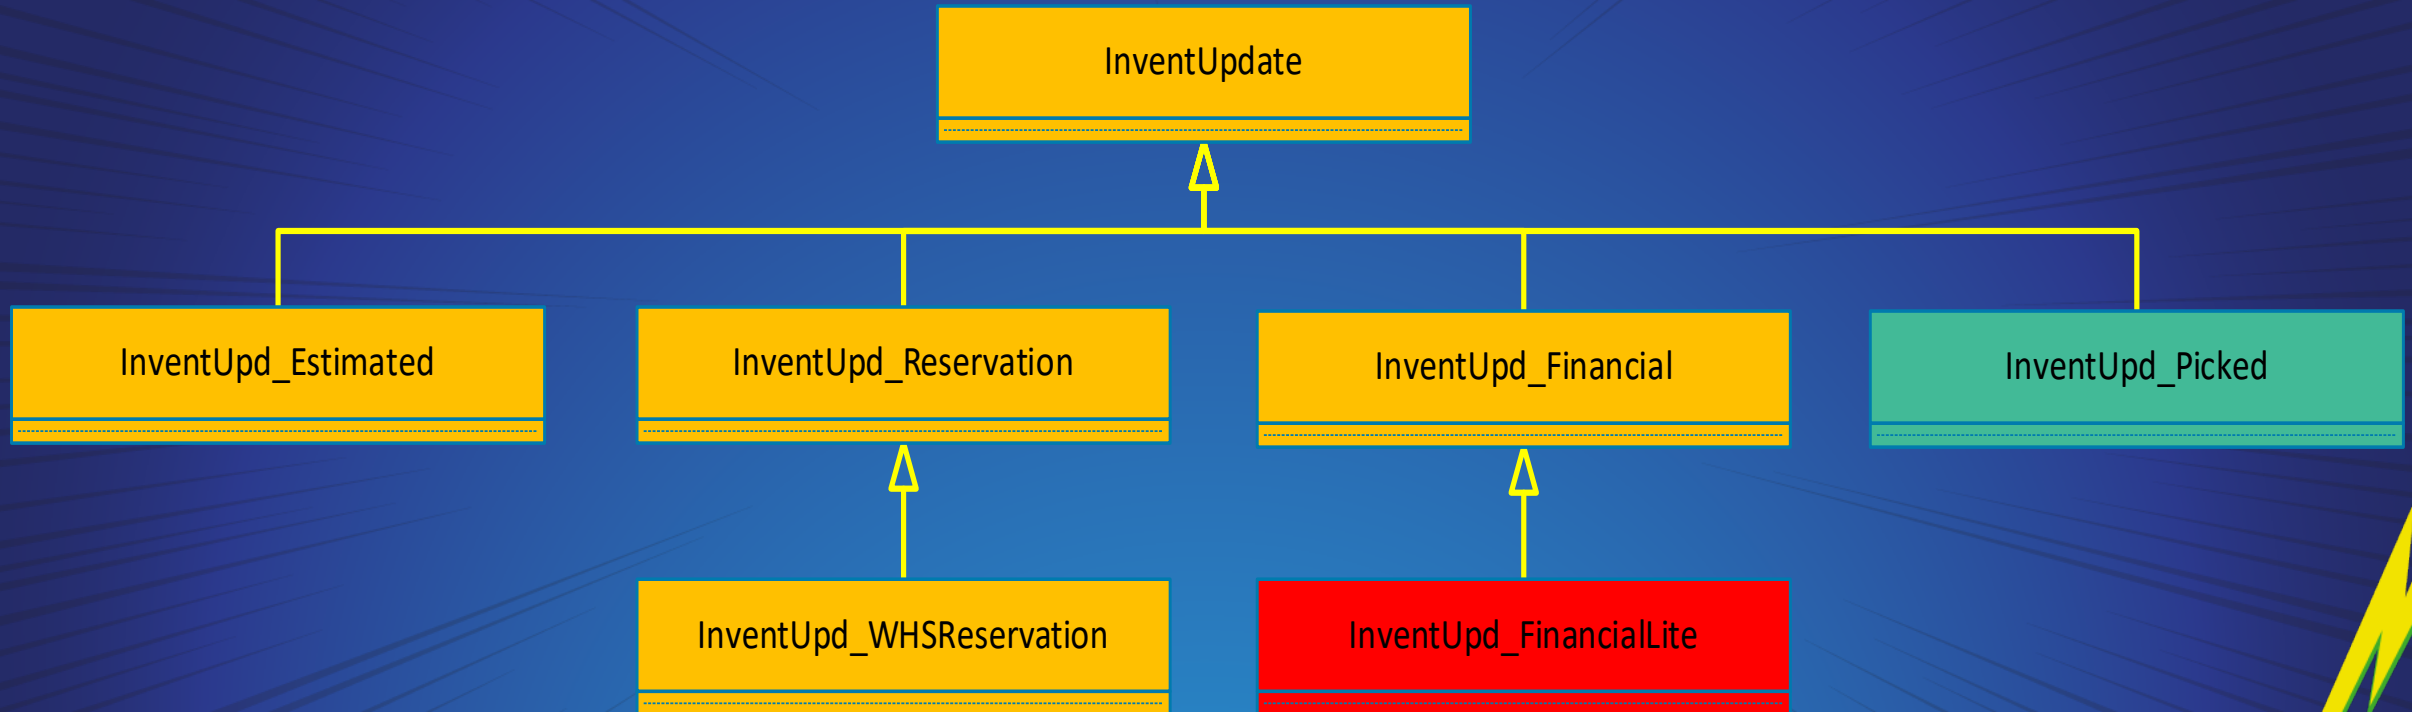

Data model changes

InventMovement hierarchy

InventUpdate hierarchy

Other X++ extensibility changes

Few methods not called in:

- WHSInvent
- WHSWorkExecutePutAwayToLocation
- Tracing form(s)

** Full list of breaking changes is in the feature validator (next slides will describe that)*

Absence of the financial impact

Cannot have warehouse operations with financial impact.

No “Ordered” and “On order” transactions

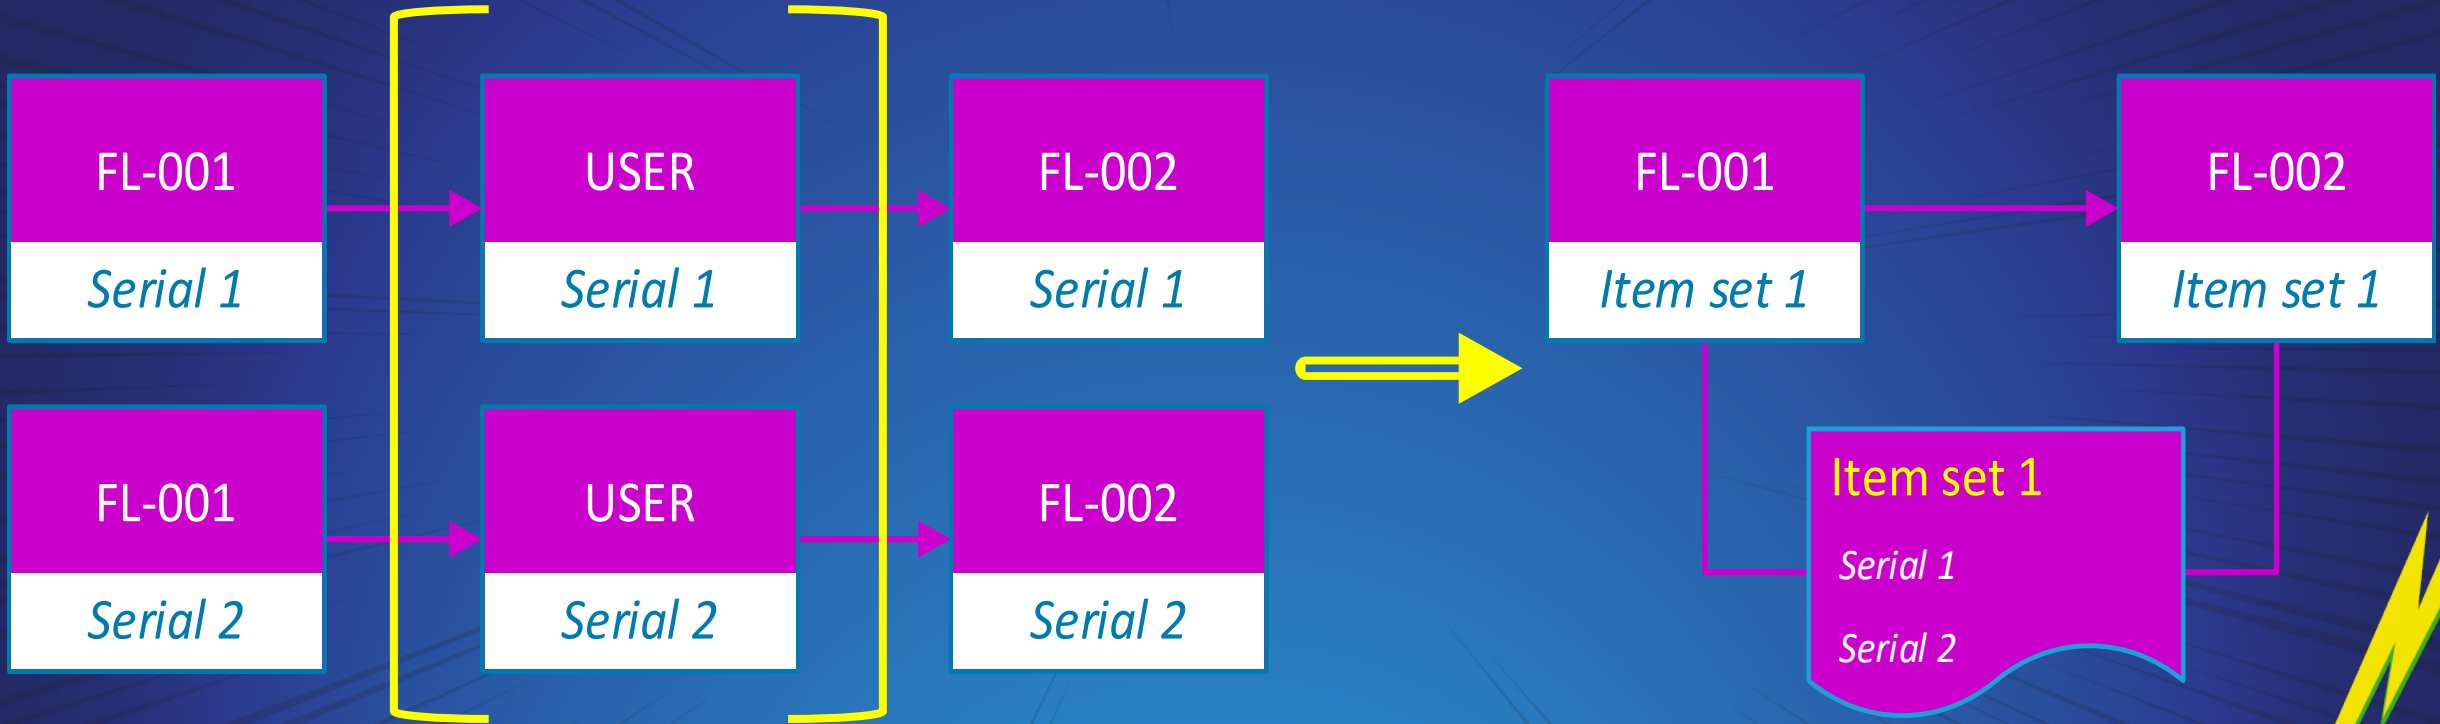

When Pick work line is executed,
the on-hand won't tell that some quantity is “expected”
on the next put location.

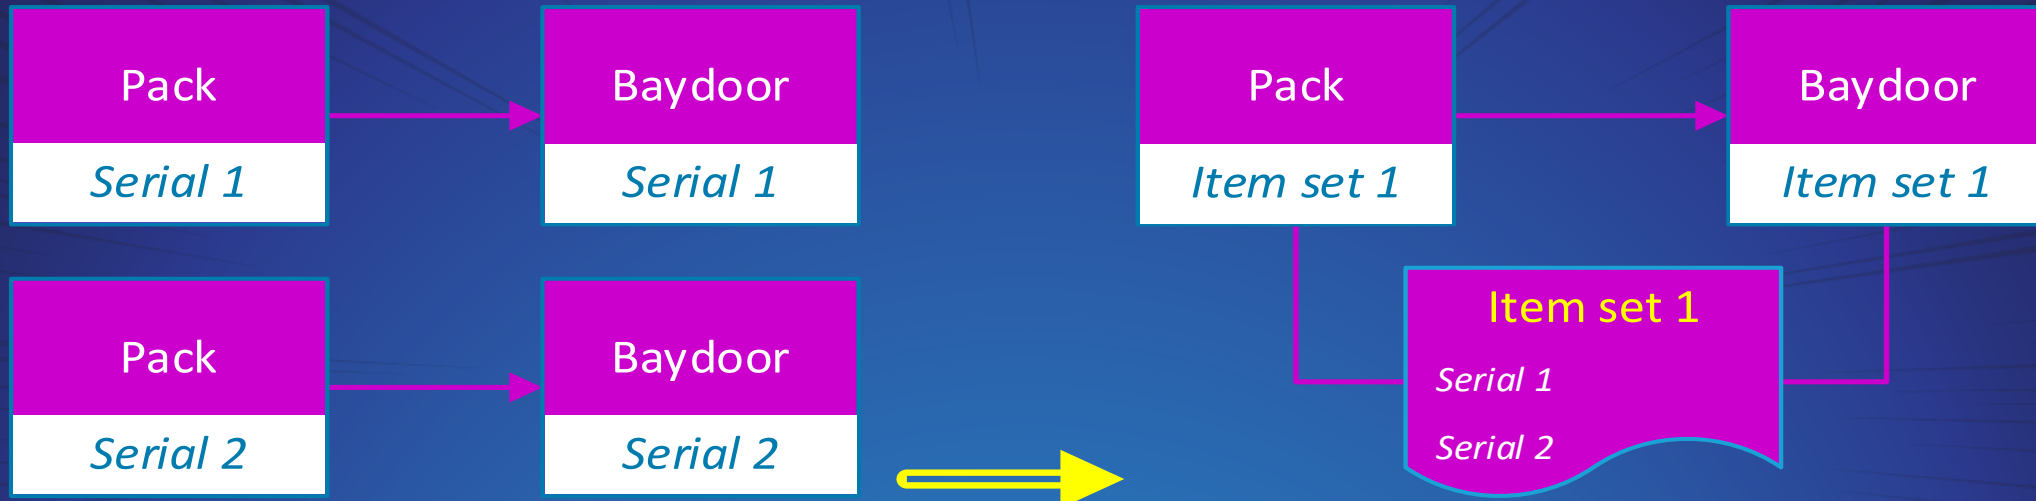

Warehouse transactions form

Some existing customizations on Inventory transactions form should be applied to the Warehouse transactions form.

WMA inventory movement

Close container

Serial ID	Lot ID
Serial 1	Lot 1
Serial 2	Lot 2

Serial ID	Trans Origin ID
Serial 1	Origin 1
Serial 2	Origin 1

Tooling: Feature validator

When user enables the feature, system finds extensions:

Override
Wrap
Subscribe

...on the “broken” methods and blocks user, if detected.

Tooling: Best Practice (BP) rules

Finds same broken extensions as Feature Validator

+

Access to “deprecated” table fields

Must run explicitly!

What does NOT change?

On-hand data structures (InventSum and WHSInventReserve)

Source document transactions
